Aerosol Jet® technology opportunities

Jiří Navrátil

PASSIVE COMPONENTS NETWORKING DAYS
12-15 September 2017, BRNO, CZECH REPUBLIC

- 1. Introduction history and formation
- 2. Aerosol Jet system
 - 2.1 System components
 - 2.2 Inks and substrates
- 3. Application of Aerosol Jet technology
- 4. Conclusion

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

- Printing technologie used for creating electronics (1950)
- Screen / sterncil printing, inkjet
- Technologies limitation, low flexibility

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

History

- **DARPA** (Defence Advanced Research Program Agency)
 - project MICE (Mesoscale Integrated Conformal Electronics)
 (1990)
 - Developing a tool for printing of the electronics
 - Ability to use CAD systems
 - Fast and easy to use
 - Wide range of printed materials
 - Wide range of substrates (including low-temp <200 °C)
 - Succes invention of the Aerosol Jet technology
 - Established company Optomec Inc. (1997)

PASSIVE COMPONENTS NETWORKING DAYS
12-15 September 2017, BRNO, CZECH REPUBLIC

- Optomec Inc.
 - Established 1997

- Headquarters in Albuquerque (USA)
- LENS a Aerosol Jet
- Investments in research 30 mil. \$
- Close cooperation with
 - General Electric, Boeing, NASA, CEA LETI, Fraunhofer, US Army, US Navy, US Air Force, Sirris, Xerox....

PASSIVE COMPONENTS NETWORKING DAYS
12-15 September 2017, BRNO, CZECH REPUBLIC

Aerosol Jet

- Selective deposition technology
- Contactless printing technology
- Fast creating or changing toolpath
 →optimal for Rapid Prototyping

Tisk aerosolu

- Ink droplets 1 5 µm
- Droplets nozzle outcoming velocity up to 50 m/s (180 km/h)
- Minimal printed line width
 10 μm (Ag ink)
- Minimal printed layer thickness
 10 nm (CNT ink)

PASSIVE COMPONENTS NETWORKING DAYS
12-15 September 2017, BRNO, CZECH REPUBLIC

Aerosol Jet vs. Screen Printing

- Pros
 - Fine lines printing
 - Easy printing on 3D substrates

- Easy change of printed motive!!!
- Cons
 - Not (yet) suitable for high volume manufacturing
 - High ink prices
 - Not suitable for covering large areas

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

Aerosol Jet vs. Inkjet

- Pros
 - Fine lines printing
 - Nozzle substrate distance variable
 - Ink's viskosity range
 - Printing on 3D substrates
- Cons
 - More complex operation
 - Higher ink prices

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC REPUBLIC

•Bubbler, Atomizers, Print heads,...

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

RICE

Pneumatic atomizer (PA)

- •Jar with ink
- Suction by Venturi effect

- •Sputtering on the jar wall >> ink smashed to **aerosol**
- •Viscosity 1-1000 mPa·s
- min 15 ml of input material
- •Deposition of wider (25+ μ m) or thicker lines

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

Ultrasonic atomizer (UA)

- •PFA sleeve with ink
- •Ultrasonic smashing of ink >> **aerosol**
- •Viscozity 1-5 mPa·s
- •min 1 ml of input material
- -Deposition of narrower lines (10+ μm) or thin layers

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

Bubbler

- •Possible (not needed) to use
- Filled with solvent
- •Nitrogen "bubbling through"
- Improves atomization
- Aditon of solvent to ink

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC RICE

Deposition heads

- •2 types
 - Fine
 - Wide

- •Nitrogen focusation 3 advantages
 - No contact aerosol-nozzle >> resistent to clogging
 - Aerosol focused to thin stream >> fine lines printing (from 10 µm), easy line width management
 - Aerosol well focused 15 mm from nozzle tip >> possibility for printing on 3D/curved/stepped substrates

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC RICE

Fine deposition head Nozzle – stainless with

ceramic tip

•Nozzle hole diameter 100, 150, 200, 250, 300 µm

Shutter

stops aerosol deposition on substrate

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC RICE

Wide deposition head

- Stainless nozzles
 - Round (0,75 mm) 🔵
 - Oval (0,25x1,5 mm and 0,25x3 mm)
- Shutter
 - Stops aerosol deposition on substrate
 - Exhausted to waste jar

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

Printing - complex process

- •Atomizer flow ATM [sccm]
- •Ultrasonic current [mA]
- •Virtual Impactor exhaust flow EXH [sccm]
- •Focusation gas flow SHT [sccm]
- •Platen temperature t_{plat}[°C]
- Ink temperature t_{ink}[°C]
- Motion velocity v [mm/s]

•Etc.

RICE

Aerosol Jet function summary

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC

RICE

Aerosol Jet inks

- Viscosity 1 1000 mPa·s
- Solid particle size up to 500 nm
- Compatibility with substrate
- Compatibility with systém (orings, metal)
- Capability of atomization??
- Possible ink modifications
 - Adding different solvents (even mixing them)
 - Functionalizing with different chemical groups (primary for organic materials)

- Compatibility with ink
- Broadly any substrate for printing (2D, 3D, platen max size, platen max load,...)
- Classic PCB, ceramics, Si wafer, metals, foils (PET, PEN, Polyimide...), plastic, paper,

- Commercial usage mobile devices printed antennas
 - Company Lite-On
 - 24/7 Aerosol Jet Marathon series
 - 4 print heads, 5-axis motion system

PASSIVE COMPONENTS NETWORKING DAYS 12-15 September 2017, BRNO, CZECH REPUBLIC REPUBLIC

Our application

- Printed electronics
 - Electrical circuits, passive components (R, L, C), RFID antennas
- Sensing application
 - Active layers PEDOT, CNT, Graphene...
 - Auxiliary contacts, interconnections
 - Interdigital electrodes
- SMD chips interconnecting
 - Electronics
 - Power electronics
- Future ??
 - Printing on fibres? Flexible ink development? Strain gauges? Thermistors? Printing of bioactive materials, enzymes?

ISUCC

Optomec Aerosol Jet

- •Unique, modern additive deposition technology
- Aerosol generation (atomization) + nitrogen focusation
- •Printing on 3D or non-planar substrates
- Rapid Prototyping

Using Inkjet, Aerosol Jet, Dispensing, Screen printing
 >their synergy in manufacturing >> hybrid made
 electronics

•Wide range of inks, substrates >> huge capability of technology in R&D (research and development)
